

Zbabělci

It is the cowardice of the intellectuals when they remain silent and remain silent instead of saying the opposite opinion, that is, that the HDV vision is interesting or, they said, it belongs in the garbage. But keep quiet and never!! not expressing an opinion is cowardice, it does not belong to the arsenal of an intelligentsia (I have an indignant tone here because I have made three dozen contributions to cosmology a month, for 10 years, and not once has anyone answered me...)

Je to zbabělost intelektuálů, když mlčí a stále mlčí namísto toho, aby řekli protinázor, tedy, že vize HDV je zajímavá anebo, řekli, že patří na smetišť. Jenže mlčet a nikdy !! neřici názor, je zbabělost, nepatří to arzenálu inteligenta (rozhořčený tón tu mám proto, že dávám do kosmologie tři desítky příspěvků měsíčně, po 10 let a ani jednou mi nikdo neodpověděl...)

Quote : **John Wheeler** was particularly interested in this question and at the time there was a paper written by two Russians **Licious** and **Kalatnikov** who seemed to prove that in the general situation you didn't get the Singularity,

My opinion 20 years old : Big-bang = **jump change of state** from pre-big-bang to big-bang, and finally to post-big-bang, which is how I describe and explain the creation of "this" universe of ours with matter from the state The universe before the Bang, when there was a state of space-time without matter..., was infinite, flat, non-curved, without the flow of time and without expansion of space (infinity does not expand). After the big-bang, zero curvature of 3+3 dimensions changes to infinite curvature of dimensions. However, this sharply decreases to an "acceptable" curvature in the first two or three milliseconds. Environment is "boiling vacuum, foam of dimensions" = plasma. The **curvature** of dimensions is then the PRINCIPLE of the construction of matter and physical fields and...and even together with the PRINCIPLE of alternating symmetries with asymmetries it is a "dynamically changing universe" in which time is already running, (three time dimensions are unfolding), spatial dimensions are unfolding , and even new laws must be created, which we can arrange in the sequence of the list of laws, rules and "mandatory systems". =In other words= : infinite flat 3+3D space-time (before the bog-bang = **before the flick**), without matter, without the passage of time, without expansion, without laws, **will "collapse" with the "flipping" (big -bangem) by "warping the dimensions"** to the "**final**" location" (state after the big-bang) and from this state a new genesis of the Universe occurs with matter, with the flow-flow of time, with the unfolding of space, interactions of the elements of matter, etc. =Attention, I'll correct myself=

: The the final location of the **crooked dimensions** (i.e. our Universe...what started with the pseudo-singularity), then after the creation it **floats** still in that original flat infinite 3+3D space-time, the original Universe did not die, did not disappear. The pre-big-bang universe, i.e. that state of flat 3+3D space-time, is still everywhere, it is "between us" and there is a **fundamental grid, warp, grid, network of non-curved dimensions 3+3** in which floating localities with curved dimensions. (ie elementary particles, interactions, up to complex DNA, galaxies, stars, all 4 fields.)

Můj názor 20 let : Big-bang = je to skoková změna stavu z doby před Velkým třeskem na ten Velký třesk a nakonec na post-Velký třesk, tak popisuji a vysvětluji vznik "tohoto" našeho vesmíru s hmotou ze stavu Vesmír před Třeskem, kdy existoval stav časoprostoru bez hmoty ..., byl nekonečný, plochý, nezakřivený, bez plynutí času a bez rozpínání prostoru (nekonečno se nerozpíná). Po Velkém třesku se nulové zakřivení 3+3 rozměrů změní na nekonečné zakřivení rozměrů. Toto se však během prvních pidi sekund, milisekund prudce sníží na „přijatelné“ zakřivení. Prostředí je "**vřící vakuum, pěna dimenzí**" = **plazma**. Křivení dimenzí, >balíčkování< je pak PRINCIPEM stavby, konstrukce hmoty a fyzikálních polí a ... a obojí spolu ještě s PRINCIPEM střídání symetrií s asymetriemi, je „dynamicky se měnící vesmír“, ve kterém již běží čas, (tři časové dimenze se odvíjejí), rozvíjejí se = rozbalují se prostorové dimenze, a dokonce musí vznikat nové zákony, které můžeme uspořádat do posloupnosti, do seznamu zákonů, pravidel a „svázaných systémů“ = chemie, biologie aj.

=**Jinými slovy** = : Nekonečný věčný plochý 3+3D časoprostor (stav před big-bangem), bez hmoty, bez plynutí času, bez expanze, bez zákonů, se „zhroutlí“ s „překlopením“, třeskem do „zakřivených dimenzí“ do lokality konečné (nikoliv nekonečné, stav po velkém třesku) a z tohoto stavu nastává nová geneze „našeho“ Vesmíru s hmotou, s tokem času, s rozvíjením prostoru, interakce prvků hmoty atd. =Pozor, opravím se= : Nová lokalita (Náš Vesmír s pokřivenými dimenzemi, co začal pseudosingularitou), pak po stvoření se stále **vznáší** v té síti, předivu 3+3dimenzí, v tom původním plochém nekonečném 3+3D časoprostoru. Původní Vesmír nezemřel, nezmlzel. Vesmír – časoprostor před velkým třeskem, tedy ten stav plochého 3+3D časoprostoru, je stále tu všude, my v něm „plaveme“, je „mezi námi“, existuje jako základní mřížka, síť nezakřivených rozměrů 3+3, v nichž jsou plovoucí lokality jako jsou galaxie, hvězdy, sluneční soustavy se zakřivenými rozměry. (a také tj. elementární částice, interakce, až po komplexní DNA).

Výklad o obměněném textu je také jinde v mé HDV.

Due to the fact that each translator chooses different words and grammar, I will give here again the Czech text translated into English.

My opinion for 20 years : Big-bang = it is a jump change from the state before the Big Bang to the Big Bang and finally to the post-Big Bang, so I describe and explain the origin of "this" our universe with matter from the state of the Universe before the Bang, when there was a state of space-time without matter ..., it was infinite, flat, uncurved, without the passage of time and without the expansion of space (infinity does not expand). After the Big Bang, the zero curvature of 3+3 dimensions turns into an infinite curvature of dimensions. However,

this rapidly reduces to an "acceptable" curvature within the first few seconds, milliseconds. Environment is "boiling vacuum, foam of dimensions" = plasma. The bending of dimensions, >packing< is then the PRINCIPLE of building, the construction of matter and physical fields and ... and both, together with the PRINCIPLE of alternating symmetries with asymmetries, is a "dynamically changing universe" in which time is already running, (three time dimensions they unfold), they develop = spatial dimensions unfold, and even new laws must arise, which we can arrange in a sequence, in a list of laws, rules and "bound systems" = chemistry, biology, etc. =In other words= : Infinite eternal flat 3+3D space-time (pre-big-bang state), no matter, no time passage, no expansion, no laws, will "collapse" with a "flip", bang) into "curved dimensions" into locations are finite (not infinite, the state after the big bang) and from this state a new genesis of "our" Universe with matter, with the flow of time, with the development of space, the interaction of the elements of matter, etc. occurs. warped dimensions that started as a pseudo-singularity), then after creation it still floats in that web, the wonder of 3+3 dimensions, in that original flat infinite 3+3D space-time. The original Universe didn't die, it didn't disappear. The universe - space-time before the big bang, that is, the state of flat 3+3D space-time, is still everywhere, we "float" in it, it is "between us", it exists as a basic grid, a network of non-curved 3+3 dimensions in which floating locations such as galaxies, stars, solar systems with curved dimensions. (and also i.e. elementary particles, interactions, up to complex DNA). An explanation of the altered text is also elsewhere in my HDV.
