

From his book I have begun to understand states and faery of time space and ideas came into my mind that actually by very curving of dimensions of time space 3+3 into the glomerules – wave-packets by this way the Universe itself realizes – produces „something“ (elementary mass particles) which will has the NATURE of the matter + „something else“ in addition to it as we will classify **as properties** (glomerate states) that „unentangled“ plane time space 3+3D has got not, such as mass, charge, spin, symmetry etc. Mr. Ullmann says: Should we take a super-microscope and observe into the deepness of microcosm so we could see as far as into the size of proton 10^{-15} m still plane time space and this plane time space would have been flatbed up to the size app. 10^{-20} m so to the scale of the size of neutron and quark but still time space would have been smooth, only with a tiny curvature „coming from the gravity“ (((of course, inside of proton or elektron respectively situation is entirely different))) and...and now let's imagine that we would zoom that flat area of sea level even more deeply on the level of minus 20 orders !!! This is already madly unimaginable magnification and only (!) on these scales we would observe increasing of fluctuation of the length dimension curvatures. Only and only on this scale of 10^{-40} m we would see bubbling quantum foam composed from time space dimensions, the space itself is boiling there. (***, The next new things I'll explain later). Already along about that time the light came into my mind telling me that in this way curved dimensions are present inside of all elementary particles, so called geons, that curved dimensions are the base upon which particles of the matter exist, that „those torsions or curvatures“ of dimensions respectively are the very style of the construction of „something“ which then later has got behaviour of the matter, that this is the matter itself. Matter is nothing else but wrapped – balled state of time space dimensions. Likewise if you appreciate that for the construction of the T O T A L matter that you can observe around us (atoms, molecules, compounds, proteins, DNA etc...) there is necessity of just !! presence of three pieces. Geons: (i.e. quarks U, quark D and elektron) , then it is amazing how everything is easy and madly realistic.... And it is realistic also for the next connections of those three pieces into atoms, molecules, conglomerates that we can see in chemical and biological textbooks. Very Mr. Ullmann helped me in 1981-3 to reach these ideas about „Two-Quantities Universe, about simplicity of the mass construction by the only and only process of dimensions curving of that 3+3 time space. No God or „Origin from Nothing“ or likewise.“ After 39 years I have different knowledge, a new astonishment: That nobody during 40 years didn't realize it, didn't realize that beauty and simplicity of matter origin by „the rolling and agglomeration“ of dimensions into the glomerules.... It is surely so much *shocking* logic, it is not a God's magic, it is so naturalistic, it's not origin of „something from nothing“, without explanation....this is also not just origin of matter itself but also originating of the laws of nature but what is important, it was GRADUAL, SUCCESSIVE birth (into the order of incidence of these laws too). This is not groping „why“ everything appear such a way how it is look like. All of this the sense of two-quantities state can be explained sensibly. - - It's very shocking me that until present time during 40years nobody was born, no physicist, who would such idea like this noticed and started work on it despite of most of them perhaps my HTQU read To answer question ... why time space dimensions are curving into quantum foam Why ????? ...why???? and whether this curving isn't only way of how very Universe produces matter after the Bang ...in plasma of vacuum, which is extremely crooked environment of very time space, where already „ torsion of dimensions is becoming matter- plasm" ...and so on etc., there particles automatically arise, and so on. It's shocking me very agonizingly, that nobody was born up to the present

days, no physicist, who would take of such cogitations note and begin to work on it ... why do dimensions of time space curve into the quantum foam?...and from her the crookedness u n p a c k e s itself but not chaotically but systematically, very sophisticatedly, in accordance with some maths, rules etc. (unwrapping is not just some bud-like in the rose...ether like Mandelbrot's fractals but not from only one point but within all point of the Universe „at a blow“ ... etc.)
